## ACKNOWLEDGEMENTS

The production of this report was made possible with the cooperation and assistance of the following individuals and programs: Richard Sun, M.D., M.P.H., and Paola Grasso, Office of AIDS; Denise Gilson, STD Control Branch; Sandy Ficenec, Vital Statistics Section, and Sally Jew, Department of Alcohol & Drug Program.

This report will be available at <http://www.dhs.ca.gov/AIDS>

# California Office of AIDS HIV/AIDS Epidemiologic Fact Sheets

## FOREWARD

The purpose of this report is to provide information on demographic, socio-economic, health and risk profiles in relation to the HIV/AIDS Epidemic. As you know, risk behaviors such as unprotected sex or sharing infected equipment, also known as “works”, or fluids used to dissolve heroin can cause transmission of HIV, hepatitis B & C, and other blood borne viruses. Needle sharing is the primary HIV risk related to injection drug use. Sharing of other injection drug using materials can also result in HIV transmission. Targeted education and prevention strategies are the most effective interventions in the fight to stop HIV disease. This report can assist in the determination of resources allocated to combating the HIV/AIDS epidemic in local health departments.

The following profiles were created by compiling information from the California, Department of Health Services, Department of Finance, Department of Justice and the Department of Alcohol and Drug Programs. The data elements were selected because they are the most common indicators that may affect a person’s risky behavior towards the HIV/AIDS epidemic. For more detailed information concerning a particular data element, the data source listed in the definition should be contacted.

Berkeley, Long Beach, and Pasadena City health department totals are included in their respective county totals.

I hope you find the data useful when planning health care services or making decisions about public health policy, having information available at the county and state level.
